

HTML: Multiple (4+1) pages website

= Individual work in class =

We would like to build a website for a small business. You are free to choose the content of your website and you are strongly encouraged to invent content (let your imagination to run free). As long as common sense is followed, you may create whatever content makes you happy. For example, a small business managed by Pepa Pig and which sells weapons, armor, potions and pokemons for manga heroes in WoW universe will perfectly fit the description of this assignment.

Task 1/2:

Carefully read the task 2 and keep it open next to you so that you can follow it. Tip: when you have finished a subtask, change its color to red. When all the requirements are in red (or whatever color you choose to highlight them), you are done most probably.

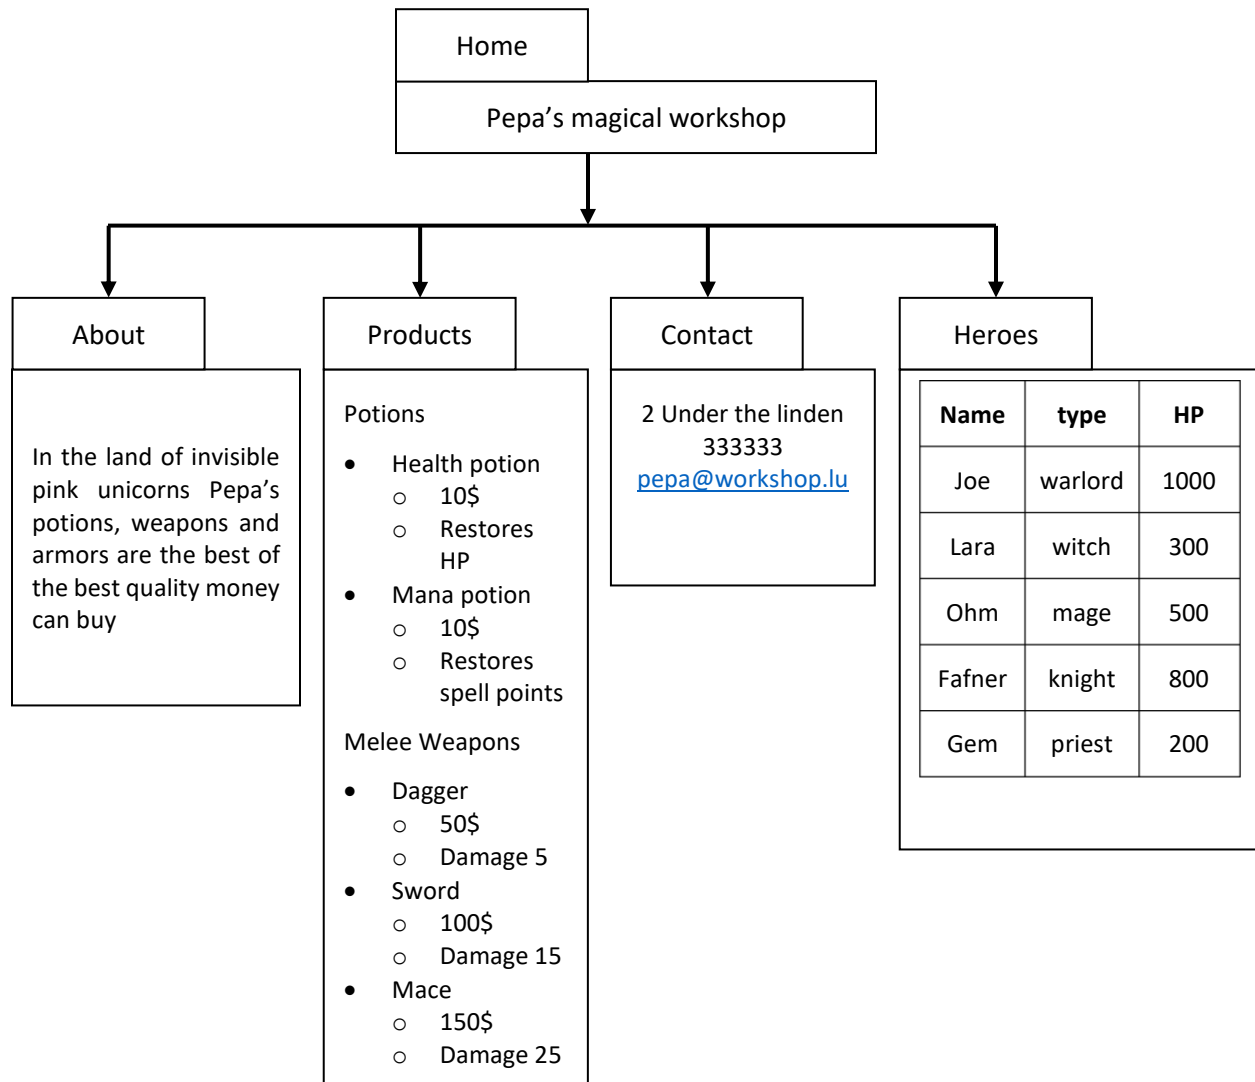

Task 2/2:

Create a titled website with the following features:

- at least **5 webpages**, namely:
 - **Home**
 - This landing page is basically your virtual front door so make sure that you make a good first impression. Some useful info may be found [here](#).
 - **About**
 - This page is basically a description of the small business for which you are building the website. It may include information about the history of the company, its philosophy (for example its commitment to renewable energy, eco-friendly products, etc). The **short** content of this page it's up to you.
 - It must contain **at least**:
 - 1 (one) picture, 2 (two) headings and 2 (two) paragraphs
 - **Contact**
 - This page contains information about the contact coordinates (they should not be real) of the small business for which this website is intended.
 - Mandatory content:
 - Physical address
 - Email (use the correct html element!)
 - Phone number
 - an embedded iframe with the location of the company on google maps.

- other content that you consider that adds some value. You may write for example some directions (such as “if you come by car to our high school, take the exit 1 on the A7 highway and follow Luxembourg direction).
- **Products**
 - This page should be a listing of all the products sold by the small business (they may not be real). In the worst-case scenario in which you don’t have the right muse to inspire, you may also sell “item5”, “item6” etc
 - Mandatory content:
 - at least 10 (ten) items (products) that you would like to present for sale, which are grouped in minimum 2 (two) description lists
 - each item must have at least two description items, namely: the price and a small description.
 - each list must have a title (given by a heading element)
- **Members**
 - This page may be renamed: People, Employees, Staff, Members, Heroes, Pokemons etc, whatever you think is more convenient. This page should contain a table with at least 6 (six) rows and 3 (three) columns, and each column must have a header. This translates in a table with 5 persons, and each person should have two attributes. It may be for example, a table with the employees of the small company, its position in the company hierarchy and its email address. Or it may be in Pepa’s shop universe a table with heroes (names), their HP, Attack, Defense and Damage. Whatever you do in this page, it has to be a table with minimum 6 rows and 3 headed columns.
- Your website must have the following layout: **each page** contains
 - a **navigation bar** that stays the same in **all pages** and which links to:
 - About, Contact, Products and Members .html pages
 - a **header** with the name of the small business which links to Home
 - a **footer** containing the text “HTML Surname Name 2022”
 - a **section** with the content of the page
- The website must be responsive.
- The CSS must be external.
- The website must have the following physical structure:
 - The root folder named “**website4 Surname Name**” containing:
 - the **Home** .html file (it might be renamed index.html)
 - a subfolder named “**Media**” containing the external .css, **all** of your pictures (and video eventually). Pictures hosted by other websites are not allowed.
 - a subfolder named Content containing all your other .html files

- The logical structure of your website must be pyramidal:

- Keep it simple and follow the requirements. Don't use elements that are not requested in this assignment. I don't want to see advanced features copied from internet but your personal work. You are encouraged to use code from www.w3schools.com (or other sources), but make sure that you are not using use code that you don't understand. It is of paramount importance that this should be your personal work. We will add some additional features later and if you can't edit your code, it simply means that it is not yours. Hint: notice that (for the moment) the CSS requirements are general. The websites with identical content will not be taken in consideration. There is a red line between getting inspired and copying.

- Turn your website as a zip archive in Teams. Zip files sent via Teams chat are exceptionally accepted. Try to be ahead the deadline, so that you may have some extra time to correct your website. The deadline is fixed on 05 May 2022, and it cannot be exceeded.
